

Notices & Litigation

Phase 4: Reply Factory I, and your requests of 6 October

Milestone M5 · "when a notice lands, it is already read, its evidence built and its replies prepared" · 7 October 2026 · branch `claude/kind-cerf-jbqu8m`, PR `KunalDesaiVJD/gst-keeper-pro#117`

1,949

reply options the dry run on your live data prepared for the 641 open notices that need a reply: none with a hyphen or dash

20 / 20

SQL test suites pass, each migration applied twice (new: notice types, reply options, the 64 templates, the Chrome runner)

6 / 6

end to end checks of the scheduled Chrome with the real extension; the office agent's 7 / 7 still pass

0

accessibility violations and 0 px overflow on every new screen at 1440 and 390 px

Nothing new is sent or filed by itself. Replies are prepared, never sent; AI reading of PDFs stays off; client e-mails stay off; the autopilot stays off until you switch it on. **To go live (\$8):** run the nine migrations from the copy page, merge the pull request, load extension 0.7.0 in the Chrome that has your CAPTCHA extension, tick "Run scheduled syncs in this Chrome", and switch the autopilot on.

Contents

7. Decisions for the partner
8. Going live, step by step
9. Acceptance numbers, what is next, and problems found that were already there

1. Your requests of 6 October, and what was built

You asked	What was built	Where to see it
<i>"there is no captcha wall ... you just need to sync client as per the agreed timing and rest will be done by extension"</i>	Scheduled syncs run in your own Chrome. GST Keeper extension 0.7.0 has "Run scheduled syncs in this Chrome". At 05:30 IST (every client) and 13:00 (clients with something urgent) the queue fills, and that Chrome takes one client at a time: it opens the portal in a window of its own, fills the user ID and password, waits for your CAPTCHA extension to fill the CAPTCHA (up to 2 minutes, adjustable), logs in, reads notices, orders, case folders, refunds, DRC-03 and applications exactly as a person's Sync does, logs out and closes the window. A CAPTCHA not filled in time is retried later (up to 3 tries). There is no CAPTCHA wall, badge or 09:00 CAPTCHA e-mail any more. A person's own sync always comes first, and the scheduled window never takes the keyboard from someone working at that PC.	Notices → Autopilot → "Scheduled Chrome"; the extension's toolbar popup
<i>"create different categories for type of notice which are critical & optional for respond"</i>	Every notice type is Critical (reply required), Optional (reply allowed) or Info only (no reply needed). Info-only notices (refund re-credits, acknowledgements, approvals, your own filings and payments) are never shown as overdue, get no reply options and get the next step "Read and close". Optional ones keep their clock but rank below required ones. A chip on every list row and on the notice page says which it is, and the lists filter by it.	Reply Factory → Notice types; chips in All notices, Work queue, notice page
<i>"give option to admin which notices to be shown on dashboard and which not to show"</i>	A superadmin or GST manager chooses, per notice type, whether the dashboard shows it. Info-only types start hidden (29 of your 670 open notices). Hidden types leave the dashboard only: every list still has them, and the dashboard says "Not on the dashboard: N notice types, M open notices". Every number on the dashboard still equals the list it opens.	Dashboard → "Notice types" button; Reply Factory → Notice types
<i>"combine all options in 1 single tab ... in main menu, keep notices at the last"</i>	Notices & Litigation is one entry in the main menu, the last one. The module's own tabs (Command centre, Work queue, All notices, Matters, Hearings, Calendar, Clients, Autopilot, Reply Factory, Reports) are inside it, at the top of every notices page. The entry is marked active on every notices page, on the desktop, the narrow rail and the phone menu.	Left menu, last item
<i>"our system should on its own prepare different replies and give option to users for the multiple response to draft"</i>	Every notice that needs a reply gets two to five reply options prepared by the database itself, the moment it is synced and again whenever its facts, issues or evidence change: contest in full, part acceptance, acceptance and payment, explanation, more time, documents relied upon, rectification, stay of recovery, as its form allows (64 templates for 29 notice forms, plus a paragraph per issue type). On the notice's Draft tab you preview each and press "Use this reply": it becomes the next draft version, with today's date, for the usual partner review.	Notice page → Draft reply
<i>"all the wordings for reply should be legal wordings & should be prepared without hyphen"</i>	Formal Indian legal drafting, and no hyphen or dash of any kind anywhere in a reply: the database refuses to store a template, a paragraph or a prepared reply that contains one. Facts are written for a reply: "FORM GST DRC 01", "financial year 2023/24", "6 October 2026", "Rs. 1,23,456 (Rupees One Lakh Twenty Three Thousand Four Hundred Fifty Six only)", "Apr to Sep 2024", the State law from the GSTIN ("the Gujarat Goods and Services Tax Act, 2017"). What the app cannot know is a fill-in in square brackets, never invented.	docs/REPLY_TEMPLATES.md; Reply Factory → Reply templates

2. Phase 4 of the roadmap, by task

Task 1 · Reading a notice Done

Every notice is read into typed facts, each with where it came from (portal list, portal case folder, read from the PDF, typed, computed): section, financial year, tax period, DIN, reply due date, hearing, officer, demand by head (IGST, CGST, SGST, cess × tax, interest, penalty, fee). The **portal reader** is always on and reads the case folder the moment it is synced (on your data it reads about 300 notices at once). The **PDF reader** uses the Claude API on the office PC and **ships off**: nothing is sent until the partner approves, a client's consent is on file and a manager switches it on; only values whose quote is found in the PDF fill *empty* fields, marked "verify"; a notice for another GSTIN is never applied; a reading whose issues fail their check goes to review. It never reads closed or old notices by itself.

Task 2 · Evidence recipes and annexures Done

For each issue the app computes the firm's position from portal figures only (GSTR-1 v 3B, 3B v 2B or 2A, the year together for ASMT-10 and DRC-01A, RCM, interest u/s 50 on the cash portion, late fee, s.16(4), filing status), as versioned annexures whose every row carries its source. They are built when the Evidence tab opens, from "Build evidence for all", and now **in the background** when staff open the notices module (target notices nobody has built yet, at most every three hours per browser), queueing the portal pulls they miss while the autopilot is on. 45 / 45 golden checks pass.

Task 3 · Client document requests Done

"Ask for what the issues need" adds the documents each issue type lists, tied to the issue, with the firm's deadline (three days before the reply is due). Reminders follow the existing e-mail ladder; with client e-mails off nothing is sent. Clients see what is asked and upload it on "Documents requested" in the client portal.

Task 4 · The Reply Factory page Done

One page for the factory's numbers and settings: due-date coverage, automatic annexures, reading accuracy, client documents; notice types; reply templates; reply rules per issue type for the partner to approve; the AI reading switch, spend and audit log; client consent.

Task 5 · Your requests (section 1) Done

Notice types and the dashboard, reply options without hyphens, the scheduled Chrome without a wall, and the single menu entry.

3. How it works when a notice arrives

1 · Synced Your scheduled Chrome (05:30, 13:00) or anyone's Sync brings the notice and its case folder.	2 · Read The portal reader fills section, period, DIN, demand by head; the notice type sets critical, optional or info only.	3 · Replies prepared Two to five reply options, in legal wording without hyphens, ready on the Draft tab.	4 · Evidence Annexures built from the portal figures; missing returns queued for the autopilot.	5 · Documents One click asks the client for what each issue needs; they upload in the client portal.	6 · Draft and review "Use this reply" starts the draft; edit, send for partner review, file on the portal yourself.
---	--	---	---	--	---

Keeping replies current. A change to a fact a reply uses (form, section, period, DIN, demand, dates, reference, officer), to its issues or annexures re-prepares that notice's options; editing a template, an issue paragraph, a notice type or the signature block re-prepares every open notice. A reply that cannot be prepared is logged and never blocks the sync. A draft you started keeps its own text.

4. Screens

Notice & Solicitor's & AS notice - Nova Fabric Pty Ltd v 24NOV0400000125 - DRC-01

Scheduled syncs in your Chrome

The Chrome that has your CAPTCHA extension runs the schedule... no CAPTCHA was.. nobody at the screen.

- Load GOST Keeper extension v.0.7.0 to the Chrome that has your CAPTCHA extension.
- In its popup, click "Run scheduled syncs in this Chrome".
- Switch on Autopilot below, keeps that PC and Chrome on at 05:30 and 13:00, a slot that finds Chrome closed hours when it opens within 3 hours.

The CAPTCHA is filled by the CAPTCHA extension in that Chrome. GOST Keeper never reads it. If it is not filled within 120 seconds, the client is lost again later. A sign someone logs in the Chrome gives hint.

Autopilot switch

On, the scheduled Chrome waits the signal.
While the autopilot is off, no job is claimed. The morning and afternoon runs, portal e-mails and report fetches only wait. Pausing keeps everything on but stops new rights until you time press a client already logged in freshies its pass.

[switch icon] Switch off Pause for 1 hour Pause until 05:00

Last changed 43 s ago by Youval

Chrome numbers

Each Chrome with scheduled syncs switched on, or as last reported (about once a minute)

Reception PC [status] Online extension v.0.7.0 seen 1 min ago OK ready for the next client

Schedule

Times on task time (STZ)

05:30 every active client not run yet today
13:00 clients that need it not run yet today
Next run today 05:30 (every active client)
CAPTCHA was 120 seconds ~ 3 times per client, 5, 10, 20 minutes apart - the day closes at 23:30.

Today

Every event appears to be:	Status	Action
46 summed	1 running	0 done

Clients not read, try reason

- CAPTCHA ran there in time
- Portal access locked
- No portal password saved
- Portal received the saved password
- Digital error
- Skipped on the CAPTCHA poll

Browsers extension v0.6.0 still syncs, but v0.7.0 were the scheduled syncs in the Chrome that has your CAPTCHA extension in its popup! Reload it from the updated extension folder chrome/extensions => Refreshed when convenient.

Reply templates: editing the wording; every hyphen or dash is shown in context and "Replace dashes" fixes it before Save

5. A reply as the system prepares it

Demo data (fictional client). The first option for a DRC-01, rendered by the database with the notice's facts; the bracketed parts are for the person drafting.

To,
The Superintendent, Range II (State)

Subject: Reply in FORM GST DRC 06 to FORM GST DRC 01 with reference number ZD2410260N0001 dated 30 September 2026 for the period from 1 April 2019 to 31 March 2020

Respected Sir/Madam,

1. Nova Fabrics Pvt Ltd (hereinafter referred to as "the noticee") is registered under the Central Goods and Services Tax Act, 2017 (hereinafter referred to as "the Act") and the Gujarat Goods and Services Tax Act, 2017 with GSTIN 24NOVAF0001N1Z5. The provisions of the Act and of the Gujarat Goods and Services Tax Act, 2017 being in pari materia, a reference in this reply to a provision of the Act or of the Central Goods and Services Tax Rules, 2017 (hereinafter referred to as "the Rules") includes a reference to the corresponding provision under the Gujarat Goods and Services Tax Act, 2017.

2. The noticee is in receipt of FORM GST DRC 01 with reference number ZD2410260N0001 dated 30 September 2026 (hereinafter referred to as "the notice", which includes the show cause notice and its annexures) issued under section 73 of the Central Goods and Services Tax Act, 2017 read with the corresponding provision of the Gujarat Goods and Services Tax Act, 2017 for the period from 1 April 2019 to 31 March 2020. By the notice, the noticee has been called upon to show cause why tax of Rs. 2,49,000, interest of Rs. 44,820 and penalty of Rs. 24,900 should not be demanded and recovered from it.

3. The noticee denies the liability for Rs. 3,18,720 (Rupees Three Lakh Eighteen Thousand Seven Hundred Twenty only) in its entirety. Every allegation in the notice is denied, save to the extent expressly admitted in this reply, and nothing in the notice shall be deemed to be admitted merely because it is not specifically traversed. This reply is furnished in FORM GST DRC 06 under rule 142(4) of the Rules.

4. The submissions of the noticee on each issue raised in the notice are as follows. They are made in the alternative and without prejudice to one another.

Issue (a): Demand in the notice under section 73, Apr 2019 to Mar 2020 (Rs. 3,18,720)
The noticee respectfully submits that the proposal on this issue is not sustainable on facts and in law. [Set out the facts, the reconciliation and the legal submissions on this issue.]

5. Without prejudice to the above, as no tax is payable, no interest under section 50 of the Act can be demanded, interest being compensatory and consequential upon a liability to tax. For the same reason, and as there is no contravention of the provisions of the Act or the Rules, no penalty is imposable.

6. The noticee requests that it be heard in person under section 75(4) of the Act before the matter is decided. The personal hearing in the matter is fixed on 26 October 2026. The noticee craves leave to add to, alter or amend these submissions and to produce further documents at or before the hearing.

7. The noticee relies on the following documents, which are enclosed and may kindly be read as part of this reply:
[List of documents enclosed]

8. In view of the foregoing, it is respectfully prayed that:
(a) this reply be taken on record and the submissions made in it be accepted;
(b) the proposals in the notice to demand tax, interest and penalty be dropped in their entirety and the proceedings be concluded;
(c) the noticee be heard in person under section 75(4) of the Act before any order is passed; and
(d) such other order be passed as may be deemed fit in the facts and circumstances of the case.

Thanking you,

Yours faithfully,
For Nova Fabrics Pvt Ltd

6. How it was verified

Check	What it proves	Result
SQL suites (supabase/tests/notices, 20 files, each migration applied twice)	Notice types and every dashboard number equal to its list; reply options prepared on arrival and change, no dash anywhere, drafts from an option, a failing reply never blocking a sync; the 64 templates on every form with all facts and with none; the Chrome runner's claim, timeouts, status and close; reading, evidence, documents	20 / 20
Chrome runner end to end (real extension 0.7.0 in Chromium, stand-in portal, test-only CAPTCHA filler)	Claim, fill, login, sync, succeeded, logout, window closed; not filled → captcha_timeout, retried, moves on; office agent mode → nothing; two Chromes never share a job; a person's sync first; restart mid-client gives it back	6 / 6
Office agent end to end (unchanged behaviour behind runner = office_agent)	The Phase 3 wall flow still works	7 / 7
Extension simulation	The sync pipeline the extension drives	44 / 44
Agent unit tests (incl. the PDF reader: quote checks, sums, scans, refusals, cap)	The office agent and its reader	98 pass
Reader end to end (stand-in Claude API, local DB)	Only quote-checked values into empty fields; GSTIN mismatch and scans apply nothing; consent and cap	9 / 9
Evidence golden checks	Each recipe's figures on a synthetic year	45 / 45
Dashboard counts check (browser)	Every number on the command centre equals the list it opens, with types hidden and with none	44 / 44 and 43 / 43
Screens at 1440 and 390 px (manager, employee, client)	No horizontal overflow, 0 accessibility violations	0 / 0
Build and type check	npm run build, npm run typecheck (notices files must be error free)	green

Dry run on your live data (rolled back, nothing kept)

All nine migrations were run on the live database inside a transaction and rolled back: they apply cleanly in about 8 seconds (the portal reader 5.7 s, the 64 templates 2.0 s). Of 670 open notices, 570 need a reply, 71 a reply is optional and 29 are info only (PMT-03 23, APL-02 4, RFD-04 1, audit closure 1); those 29 leave the dashboard and get "Read and close", and the dashboard's open tile becomes 641. Overdue stays 528: none of the overdue notices is an info-only type. 1,949 reply options were prepared for all 641 notices that need a reply, none with a dash or an unfilled placeholder. Due-date coverage is unchanged by these steps (31 notices still have no date: they need the PDF read or a date typed). The autopilot is off on live and stays off.

7. Decisions for the partner

Decision	What is proposed	Default today
Reply wording (the 64 templates)	Each is a starting point in the firm's name. A partner should read them once, especially the law points left as fill-ins: penalty rates and pre deposit percentages (they changed with recent Finance Acts), s.74A sub-sections, rule 90(3)'s proviso, Circulars 183/15/2022 and 193/05/2023, REG 31 replies, DRC 08A. Listed in docs/REPLY_TEMPLATES.md.	In use, editable in Reply Factory → Reply templates
Notice types	Which forms need a reply and which the dashboard shows (§1). Change any type in one click.	As seeded
Reply rules per issue type	The firm's position for each of the 19 issue types (Reply Factory → Reply rules); a partner approves each.	Proposed
AI reading of notice PDFs	What is sent (the PDF, fixed instructions, the issue codes; nothing else about the client), consent per client, spend cap, audit. docs/REPLY_FACTORY_POSITIONS.md §3.	Off
CAPTCHA filled by your CAPTCHA extension	Recorded as the firm's decision (docs/PORTAL_AUTOPILOT_POSITIONS.md §1a). GST Keeper never solves, reads or sends a CAPTCHA; automated filling may not be what the portal's terms expect; use a Chrome profile kept only for portal syncs, because a CAPTCHA extension can read every page open in its profile.	Autopilot off until you switch it on
Evidence positions	Engineering choices inside the recipes (first in, first out timing; 4D(1) before the 2B comparison; rule 36(4) month by month; s.16(4) month of claim; 3B Table 5.1 interest set off). Listed in positions §6.	As built

8. Going live, step by step

1. **Run the nine migrations** in order from the copy page (Supabase → SQL editor → New query → paste → Run), then the final check: every row should say true. They take about 8 seconds together.
2. **Merge the pull request**; the app on gst.vjdesai.com updates by itself.
3. **On the PC whose Chrome has your CAPTCHA extension**: `chrome://extensions` → Reload (or Load unpacked) the extension folder, version 0.7.0. Better still, a Chrome profile kept only for portal syncs, with both extensions.
4. In the GST Keeper popup, **tick "Run scheduled syncs in this Chrome"** and give the PC a name.
5. A GST manager **switches the autopilot on** (Notices → Autopilot). Keep that PC and Chrome on at 05:30 and 13:00, the display on if you can; a slot that finds Chrome closed runs when it opens within three hours.
6. **Check that your CAPTCHA extension fills the GST login box by itself**; if it needs longer than 2 minutes, raise the CAPTCHA wait in Autopilot → Settings.
7. **Reply Factory** → **Reply templates**: set the place and the signatory for the signature block; review the wording.
8. **Reply Factory** → **Notice types**: adjust which types are critical or optional and which the dashboard shows.

Other staff PCs can stay on extension 0.6.0; only the scheduled PC needs 0.7.0.

9. Acceptance numbers, what is next, and problems found that were already there

Phase 4 target	Where it stands on your data
Due-date coverage of open notices ≥ 98%, each with its source	95.4% after these migrations (31 of 670 without a date). The rest need the PDF read (AI reading, once approved) or the date typed; the Reply Factory lists them by form.
≥ 70% of open ASMT-10, DRC-01A, DRC-01B, DRC-01C with an automatic annexure	41 such notices are open, but only 2 belong to clients whose returns have been pulled from the portal. Once the scheduled Chrome runs, the background builds queue the missing pulls and build the annexures; this number follows within a few days.
Reading: due date exact ≥ 98%, demand within ₹1	Measured from people's verifications once AI reading is on; below 20 verifications the page says there are too few to judge.

Problems found that were already there (not changed in this work)

- **GSTR-2B and GSTR-2A reports in the Reports Hub show zero tax.** The 2B reader takes IGST and CGST from the wrong fields; the 2A reader looks for tax on the invoice instead of its items. The evidence recipes have their own reader and are not affected. A small, separate fix.
- **Clients are signed out on every reload.** The app re-checks a saved login against `user_roles`, and on live no client has a row there (76 clients have a login ID). The new "Documents requested" page works within a session.
- **"New notices captured today"** on the dashboard counts the IST day but opens the last-24-hours list; they can differ around midnight.

Next (roadmap Phase 5)

Reply drafting beyond templates (paragraphs chosen per issue from the evidence, AI-assisted once approved), the e-way bill recipe, supplier registration status for the cancelled-suppliers recipe, quarterly filers in the recipes, and filing support.
